

AHU Project Data Structure Map

1. Root Archive: Folder 1 (AHU).zip

Main Folder

AHU-EIH0300_[리턴팬 제외 모터 내장형]

(Main folder named according to the AHU model)

2. 3D Asset Group

.glb (Binary Format)

A binary 3D model file containing all data embedded into a single file for faster loading and deployment.

.gltf (JSON/ASCII Format)

The primary structural file of the 3D model in JSON-readable format.

Textures / Image Assets

Texture image files referenced by the **.gltf** file for rendering the visual surface appearance of the model.

3. Metadata & JSON Folder

Level 1: JSON Data (Global Metadata)

JSON data related to the overall **.glb** file, including hierarchy structure information and extracted general metadata.

Level 2: cad-parts-json (Sub-folder)

Individual CAD Part JSONs

Individual JSON files for each CAD component, converted using Asset Transformer Toolkit through the Custom Action (**ExportMetadataAndPrefab.cs**) to store detailed metadata and properties for each specific part.

Custom Action Source: <https://github.com/polymaxcube/unity-industry-rulesets/blob/main/Actions/ExportMetadataAndPrefab.cs>
